Hiring Team

TikTok Seattle, WA

Dear Hiring Manager,

Turning data into insights has been my motto throughout my time as a US undergraduate student. With TikTok's mission to inspire creativity and bring joy, I am excited to submit my resume for the Data Analyst Intern (TikTok Shop AMS Data Science) - 2026 Summer position. I am majoring in Applied Mathematics and Statistics and minoring in Computer Science at Stony Brook University, New York, and expect to graduate in the spring of 2027. My quantitative background and passion for problem-solving make me a strong candidate to help maximize e-commerce efficiency and drive sustainable growth for TikTok Shop.

My academic journey and hands-on research have equipped me with the mathematical statistics and data analysis skills required for this role. While working at the Korea Polar Research Institute as a Student Researcher, I utilized molecular dynamics simulations in GROMACS and conducted research to analyze the correlation between liquid flow velocity and protein binding degrees to establish functional relationships. Furthermore, I successfully applied mathematical modeling to develop functions for flow velocity variation as a function of pipe diameter to optimize experimental conditions and improve fluid dynamics efficiency. These experiences have honed my ability to identify patterns, provide data attribution, and generate actionable insights.

TikTok's dynamic environment demands a proactive and collaborative approach. Throughout my academic career, I have cultivated these skills by working as a Resident Advisor, hosting and managing diverse events, and as a Teaching Assistant, supervising more than 200 students. These roles required cross-functional communication and leadership in fast-paced settings. Though I have participated in diverse extracurricular activities, I have maintained a GPA of 3.86, deepening my understanding of academics. Additionally, I am fluent in both English and Korean, which further enhances my ability to communicate and collaborate within diverse, global teams. I would appreciate the opportunity to discuss my qualifications more fully in an interview. Thank you for your consideration.

Sincerely,

Sangjin Lee
